Claim 3; Fig 1; 100pp; English.

This sequence represents the nucleic acid encoding the mouse p/CIP
(p300/CBP/co-integrator-associated protein) polypeptide. The protein
can regulate gene expression so are potentially useful therapeutically,
eg. against (breast) cancer, inflammatory disease (e.g. atherosclerosis)
or osteoporosis.

This sequence represents a polynucleotide of the invention, and encodes a secreted protein. It was isolated from a human adult testis cDNA library, and is designated clone AJI_1. The DNA sequences and encoded polypeptides can be used as nutritional sources or supplements, or may exhibit e.g. cytokine and cell proliferation/differentiation activity, immune stimulating or suppressing activity, heematopoiesis regulating activity, receptor/ligand activity, anti-inflammatory activity, cachinibin activity, chemostatic/chemokinetic activity, cadherin/tumour invasion suppressor activity, tissue growth activity, tumour inhibition activity or other activities.

claim 1; Page 487, 618pp; English.
Claim 1; Page 487, 618pp; English.
Cram persent sequence represents a human expressed sequence tag (EST).
The polynucleotide, which is a secreted EST, and the encoded protein
are predicted to have useful biological activities which would make
them suitable for treating, preventing or ameliorating medical
conditions in humans and animals, although no supporting data is
given. Suggested activities include nutritional activity, immune
activity, tissue growth activity, haematopoiesis regulating
activity, tissue growth activity, activity, anti-inflammatory activity,
chemotactic/chemokinetic activity, anti-inflammatory activity,
cadherin/tumour invasion suppressor activity, tumour inhibition
activity. The polynucleotide may also be useful for gene therapy.

Claim 18; Page 24; 38pp; English.

Char gequence encodes an epitope-tagged TATA-box binding protein (TBP)

C that is expressed by the transgenic non-human animals of the invention.

C that is expressed by the transgenic non-human animals of the invention.

C characterise higher-order transcription complexes (from different tissue and cell types, optionally at different developmental stages). It is also used to identify new and/or specific TBP associated factors (TAFS, e.g. transcription factors, activators or inhibitors) and TAF-interaction factors, and to raise antibodies against TBP. The TAFS may be useful for regulating gene expression, e.g. identifying human analogues for use in drug screening. The antibodies are used for affinity purification of TBP and its complexes. TBP can isolate transcription complexes from a wide complexes. TBP can isolate transcription complexes from a wide complexe in isolation from a particular cell type).

New polynucleotides encoding human secreted proteins - derived from re-g. human blood, Kidney, foetal lung, placenta, testes, brain,

PT e.g. human blood, Kidney, foetal lung, placenta, testes, brain,

PT ovary, pituitary, retina and colon cDNA libraries

PS claim 1: Page 176: 633pp: English.

C This sequence represents an expressed sequence tag (EST), and is a colynucleotide of the invention. The polynucleotides of the invention are polynucleotide of the invention. The polynucleotides of human tissue colon colon by the manual tissue sources. The EST sequences and proteins encoded by them are predicted to have useful blological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals although no supporting data is given. Suggested activity, hammostatic colon colon activity, immune stimulating or suppressing activity, hammostatic cactivity, activity, receptor/ligand activity, activity, activity, activity, activity, the EST sequences are also stated to be useful for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                    This sequence encodes an epitope-tagged TATA-box binding protein (TBP)
This sequence encodes an epitope-tagged TATA-box binding protein (TBP)
This sequence encodes an epitope-tagged TATA-box binding protein (TBP)
The animals are used to produce TBP. TBP is used to isolate and
characterise higher-order transcription complexes (from different tissue
and cell types, optionally at different developmental stages). It is also
used to identify new and/or specific TBP associated factors (TAFS,
e.g. transcription factors, activators or inhibitors) and TAF-interaction
factors, and to raise antibodies against TBP. The TAFS may be useful for
fequilating gene expression, e.g. disease-related genes, so are potential
pharmaceuticals, also for identifying human analogues for use in drug
screening. The antibodies are used for affinity purification of TBP and
its complexes. TBP can isolate transcription complexes from a wide
transcription from a particular cell type).

The animals are used to produce TBP. TBP is used to isolate and characterise higher-order transcription complexes (from different tissue and cell types, optionally at different developmental stages). It is also used to identify new and/or specific TBP associated factors (FFS, e.g. transcription factors, activators or inhibitors) and TAF-interaction factors, and to raise antibodies against TBP. The TAFs may be useful for requilating gene expression, e.g. disease-related genes, so are potential pharmaceuticals, also for identifying human analogues for use in drug screening. The antibodies are used for affinity purification of TBP and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Transgene for epitope tagged TBP protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Wew autosomal dominant spinocerebellar ataxia type 1 nucleic acid used to develop prods. for detection or presymptomatic diagnosis of a Scal disorder.

1086105ure; Fig 2, 111pp; English.

084831-084835 show the CAG repeat regions of five individuals affected with spinocerebellar ataxia type 1 (SCA 1). It is within SCA repeat region (Q84804) that the mutations responsible for SCA inccur. The full nucleic acid (Q84793) and its protein product (R71111) can be used to develop products, for the presymptomatic detection of a SCA 1 disorder.

Orr H. Zoghbi HY;
WPI; 95-061001/08.

New autosomal dominant spinocerebellar ataxia type I nucleic acid diagnosis of a SCAI disorder.

Lused to develop prods. for detection or presymptomatic diagnosis of a SCAI disorder.

Disclosure; Fig 2; 111pp; English.

094831-084835 show the CAG repeat regions of five individuals affected with spinocerebellar ataxia type I (SCA I). It is within CAG repeat region (Q84804) that the mutations responsible for SCAI occur. The full nucleic acid (Q84793) and its protein product (R71111) can be used to develop products, for the presymptomatic detection of a SCA I discorder.

Sequence 171 BP; 52 A; 59 C; 56 G; 4 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   25-SEP-1995 (first entry)
Spinocerabellar ataxia type 1 CAG repeat region patient #4.
Spinocerabellar ataxia type 1; SCA 1; presymptomatic diagnosis;
CAG repeat region; patient #4; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1.6%; Score 73.2; DB 1; Length 171;

08481-084835 show the CAG repeat regions of five individuals
affected with spinocerebellar ataxia type 1 (SCA 1). It is within
CAG repeat region (084804) that the mutations responsible for
SCA 1 occur. The full nucleic acid (084793) and its protein product
(R7111) can be used to develop products, for the presymptomatic
detection of a SCA 1 disorder.

Claim 11: Fig 1A-B; 119pp; English.
This polypeptide comprises a novel nuclear receptor transcriptional mediator of designated transcriptional intermediary factor-2 (TIF2).
TIF2 interacts directly with the ligand binding domains (LBD) of several nuclear receptors (NR) in an agonist—and AF2-integrity-claim control of the manmalian cells.
TIF2 interacts directly with the high advances the activity of NR AF2s when overexpressed in mammalian cells. Its amino acid sequence was deduced from a cDNA clone (see V03517) obtained from a human placents cDNA expression library. Some regions of TIF2 show significant homology with the human steroid receptor coactivator SRC-1. TIF2 appears to be widely expressed in human tissues.
Recombinant methods for making TIF2 polypeptides are provided, as are screening methods for identifying agonists and antagonists of nuclear receptor AF-2 function, TIF2 AD1 activity and TIF2 AD2 activity. The products are useful in assays for identifying drugs capable of enhancing or inhibiting NR-mediated pathways. They can sequence 1464 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   60 ldnfnfkpdkcailketvkqirqikeqekaaaanidevqksdvsstgqgvldkdalgpmm 119

Steroid receptor coactivator-1 polypeptide and DNA - regulated using a molecular switch, used in gene therapy
claim 3; Fig 1; 116ppp: English.

This polypeptide comprises human steroid receptor coactivator-1

(SRC-1), a novel protein required for human progesterone receptor

(SRC-1), a novel protein required for human progesterone receptor

(SRC-1), a novel protein required for human progesterone receptor

(SRC-1), a novel protein required for human progesterone receptor

(SRC-1), a novel protein required for human progesterone receptor

(SRC-1), a novel protein required for human progesterone receptor

(SRC-1), a novel protein required for human progesterone receptor

(SRC-1), a novel protein required for human progesterone receptor

(SRC-1), a novel protein required for human progesterone receptor

(SRC-1), a novel protein required for human progesterone receptor

(SRC-1), a novel protein required for human progesterone receptor

(SRC-1), a novel protein required for human progesterone receptor

(SRC-1), a novel protein required for human progesterone receptor

(SRC-1), a novel protein required for a novel call disease can be treated by introducing SRC-1 nucleic acid (see T84543) into a host cell and infusion the new patient causing an increase in the transcription of SRC-1 (claimed). A molecular switch can be used to regulate expression of a nucleic acid cassette incorporating
                                                                                                                                                                                                                        This sequence is secreted protein, encoded by a polynucleotide of the invention. The DNA was isolated from a human adult testis cDNA library, and is designated clone AJL1. The DNA sequences and encoded polypeptides can be used as nutritional sources or supplements, or may famine stimulating or suppressing activity, had mantopolasis regulating activity, anti-inflammatory activity, activity, receptor/ligand activity, anti-inflammatory activity, activity, chambition activity, chemostatic/chemokinetic activity, tumour inhibition activity or other activity, tissue growth activity, sequence 147 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 20; Fig 14.1-14.3; 154pp; English.
This is the amino acid sequence of human CLOCK protein, an integral component of the circadian clock that serves to regulate various
an SRC-1 coding region for use in gene therapy. Transcription of target gene can be decreased by providing a nucleic acid encoding dominant-negative inhibitor of a SRC-1 polypeptide in a cell containing the target gene (also claimed). Sequence 1061 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 572 dralgidklv-qgggldvlserfppqqatpplimeerpnlysqpysspfptanlpspfqg

The amino acid sequence of the human Ah receptor protein. The Ah receptor is a soluble protein which mediates an individuals response to a variety of drugs, carcinogens and toxic agents. The human gene was isolated from a coba library derived from hepatoma cell line HepG2 mRNA using as a probe a 1.4 kb EcoRI fragment from the murine Ah receptor gene (099601). This screen isolated a clone designated 91A which contained a 4.47 kb encoding 732 amino acids prior to an in-frame termination codon. A 920 bp encoding 732 amino acids prior to an in-frame termination codon. A 920 bp encoding 732 amino acids prior to an in-frame termination codon. A 920 bp witch overlapped by 1.56 kb with 91A. Sequence analysis of hul4 extended the ORF of 91A by an additional ils amino acids to an initiation methionine. Clone 91A also contains 2.27 kb of 3' untranslated region (UTR). To complete the 3' UTR, primers 099608-9 were used in a rapid amplification of cDNA ends (RACE) method. The Ah receptors are useful in bloassays to detect environmental pollutants. The genes can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human Ah receptor protein.

                                         and the persistence of circadian rhythmicity. The sequence was changed from the isolated Clock gene (see V61450). Mouse CLOCK (see W79529) is also claimed, CLOCK is a member of the bHIH-PAS domain family of proteins, and thus likely interacts directly with DNA.

It has Gln., Pro. and Serrich C-terminal regions characteristic of activation domain transcription factors. The invention provides call activation domain transcription factors. The invention provides isolated and purified CLOCK polypeptides, polynuclectides, vectors and host cells. The polynuclectides or polypeptides can be used to treat disorders of altered or disorated and rivalms e.g. isolated assonal affective disorater, sleep-wake cycle disorders (such as mood state, stress, neurological disorders, to regulate diet and food intake sepecially for diabetes, to treat cardiovascular, respiratory, liver or endocrine disorders, and for diagnosis and treatment of abnormal cell division such as cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    generate recombinant organisms useful as blomonitors for environmental pollutants.

An inceptor gene and a reporter gene, used for detecting Ah receptor gene and a reporter gene, used for detecting Ah receptor gene and a reporter gene, used for detecting Ah receptor Claim 1; Fig 6: 47pp; English.

This sequence represents the human Ah receptor molecule. The cDNA encoding this protein may be used to transform a viable yeast cell, which may also be transformed with a plasmid expressing an Ah receptor nuclear translocator, a dioxin responsive element and a reporter gene. The reporter gene detects the activation of the Ah receptor upon the binding of agonists to the Ah receptor. The transformed cells can be used to detect agonists to the Ah receptor in environmental samples such as air, water and soil or in tissue samples. They can be used for detecting and monitoring environmental pollutants such as dioxin.
                                                                   7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           84 -EQG-KTISNDDDVQKADVSSTG-QGVIDKDSLGPLLLQALDGFLFVVNREANIVFVSEN 140

This is the amino acid sequence of mouse CLOCK protein, an integral component of the circadian clock that serves to regulate various aspects of circadian rlymth, including intrinsic circadian period and the persistence of circadian rhythmicity. The sequence was deduced from the isolated Clock gene (see V61401). Human CLOCK (see V9533) is also claimed. CLOCK is a member of the bHLH-PAS domain family of proteins, and thus likely interacts directly with DNA. It has Gln., Pro- and Ser-rich C-terminal regions characteristic of activation domain transcription factors. The invention provides isolated and purified CLOCK polypeptides, polynucleotides, vectors and host cells. The polynucleotides or polypeptides can be used to iterat disorders of altered or disrupted circadian rhythms e.g. jet-lag, seasonal affective disorder. sleep-wake cycle disorders cuch as mood state, stress, neurological disorders, to regulate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -rqd--wk-ptflsneeftqlmlealdgfflaimtdgsiiyvsesvtsllehlpsdlvdg 152
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          rnksekkrrdqfnvlik-elgsmlpgnarkmdkstvlqksidflrkhke-ttaqsdasei 96

This sequence represents an epitope-tagged TATA-box binding protein (TBP) that is expressed by the transcentc non-human animals of the invention. The animals are used to produce TBP. TBP is used to isolate and characterise higher-order transcription complexes (from different tissue and cell types, optionally at different developmental stages). It is also used to identify new and/or specific TBP associated factors (TAFS, e.g. transcription factors, activators or inhibitors) and TAF-interaction factors, and to raise antibodies against TBP. The TAFS may be useful for requlating gene expression, e.g. disease-related genes, so are potential pharmaceuticals, also for identifying human analogues for use in drug screening. The antibodies are used for affinity purification of TBP and its complexes. TBP can isolate transcription complexes from a wide variety of different tissues and cells (contrast known methods that are limited to isolation from a particular cell type).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    JT 980561 standard; Protein; 805 AA.

                                                                     Claim 1: Column 31-36; 24pp; English.

The amino acid sequence of the murine Ah receptor protein. The Ah receptor is a soluble protein which mediates an individuals response to a variety of drugs, carcinogens and toxic agents. The gene was isolated from a mouse genomic DNA library using the probes 099603-5. These probes were determined from the N-terminal sequence of a purified Ah receptor, which was purified from C57BL/6J mouse liver. The screen isolated a clone designated cAhl containing the full length cDNA. The 1.4 kb containing the full length clones covering the coding sequence of the human AH receptor (099602). The Ah receptors are useful in bioassays to detect environmental pollutants. The genes can be environmental pollutants. The genes can be environmental pollutants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is the protein sequence of a gene causative of spinocerebellar attains type 2 (SCA2), a neurodegenerative disease. The gene associated with SCA2, has a tri-inclectide (CAG) repeat region which in the serpression product produces a polyglutamine sequence from Gln-166 to Gln-188. In the normal gene there are 15-25 CAG repeats but in SCA2 patients this number is increased to 35-100. Peptides encoded by nucleic acid fragments (DNA or RNA) containing sequences from the SCA2 associated gene, antibodies recognising the peptides and antisense nucleic acids hybridising with the nucleic acid fragments can be used for the investigation and diagnosis of SCA2. They can also be used for the treatment of SCA2 by antisense therapy or gene therapy.
                                                                                                                                                                                                                                                                                                                                          .

This polypeptide comprises a 68 kDa yeast transactivating factor,
TAF-68, that is associated with the TAFA-box binding protein.

TAF-68 that is associated from Saccharomyces creevisiae cells by
virtue of its affinity to fungal or human TATA-box binding proteins
using chromatographic procedures. It can also be recombinantly
produced in host cells utilising vectors carrying a TAF-47 nucleic
acid (see V04771). The yeast TAF complex includes 9 polypeptides
cof 180, 145 (see W33622), 116, 90 (see W33634), 68, 62, 51-54, 47
(see W33627) and 30 kDa. At least some of these are required for
transcription in vitro. TAFs are also essential for viability.

TAF-68 can be used in the discovery, design and development of
antifungal agents, e.g. for treatment of candida albicans infections
(candidaesis). It can also be used to raise diagnostically useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            159 ltmslkpqqqqqqqqqqqqqqqqqqqqqqqqqqqqspsgllaspaaapsps 215

This is the amino acid sequence of mouse neuronal PAS domain protein NRASI, a new member of the basic helix-loop-helix (bHHH)-PAS family cof transcription factors. A database search for expressed sequence tags bearing sequence similarity to the PAS domain of the aryl characteription factors. A database search for expressed sequence primers for PCR amplification of hybridisation probes, and clones can primers for PCR amplification of hybridisation probes, and clones can primers for PCR amplification of hybridisation probes, and clones (see V41245-59) coding for human and mouse NPAS proteins (see V41245-59) coding for human and mouse NPAS proteins (see V41245-59) coding for human and mouse brain tissue, human brain of neurological tissue such as brain tissue. They can be produced recombinantly from transformed host cells or purified from mouse combinantly from transformed host cells or purified from mouse compliantly from transformed host cells or purified from mouse host cells or purified from mouse host cells can be used in diagnosis (e.g. genetic hybridisation screens for NPAS transcripts), the biopharmaceutical industry (e.g. as immunogens, reagents for screening chemical libraries for lead pharmacological agents).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ë

N'FDLE VUOCHE PAS domain protein 1 proteins - used for isolating EPASI regulators, e.g. a heat shock protein

Tregulators, e.g. a heat shock protein

Claim 1; Columns 25-30; 28pp; English.

The present sequence represents a novel human endothelial PAS domain

Drotein 1 (EPASI). EPASI proteins can regulate specification of endothelial tissue, such as vasculature, the blood-brain barrier, etc..

The protein can be used in a screening assay for agents that modulate binding of EPASI to a binding target, especially a basic helix-loop-helix (HIHI)/PAS protein, a heat shock protein or hypoxia inducible factor (HIF-1 alpha) binding site. The EPASI protein is inducible factor on the binding target and a test agent and the effect of the test agent on the binding affinity of the protein for the target is determined. The proteins may be produced recombinantly from transformed host cells from the subject EPASI encoding nucleic acids or purified from mammalian cells. The proteins may be used in diagnosis (e.g. genetic of the modulate EPASI gene expression) and in the biopharmaceutical conductions are subject to the protein and in the biopharmaceutical conductions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human endothelial PAS domain protein 1 (EPAS1).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A NY-SUB: 17.0312.

Antibody 1/2312.

Antibody 1/2312.

Antibody 1/22 used for treating or preventing neuro-degenerative diseases - associated with proteins containing long poly:glutamine repeats, e.g. Huntington's disease

Example 7; Edg 7; Edgp: French.

The invention relates to a monoclonal antibody (MAD) 1C2 for the retainment of neurodegenerative diseases associated with the presence of retainment of neurodegenerative diseases associated with the presence of polyglutamine repeat regions. This MAD is already known for its affinity to the TATA binding protein (TBP) transcription initiation factor, especially at the amino acid sequence LEEOGROGOGO found at the N-terminus of TBP. MAD 1C2 has been shown to have a high affinity for polyglutemine repeats with a proportional affinity to the number of glutamine repeats with a proportional affinity to the number of glutamine repeats with a proportional affinity genes encoding proteins containing long polyglutamine repeats which are implicated in neurodegenerative diseases. A screen of an expression containing long polyglutamine repeats with a series in the firm a lymphoblastic cell line from a patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  09-FEB-1998 (first entry)

```

```
cc suffering from spinocerebellar ataxia (SCA), with MAb 1C2 isolated 6
cnew sequences (T78906-T78911) encoding polyglutamine repeats. MAb 1C2
cc also isolated the complete SCA2 gene in clone DANI Which appears to
ccontain 2 open reading frames (ORF), the second of which may be generated
by an frameshift slippage or by an alternative splicing event. This
sequence represents the first ORF encoded by the SCA2 gene. The protein
cc contains a 22 amino acid polyglutamine region. Normal SCA2 proteins
cc contain 17-29 glutamines in the repeat whereas the mutant sequence
from patients with SCA contains at least 30, preferably 37-50 repeats.
cc MAb 1C2, active fragment of it or nucleic acids encoding it are
specifically used to treat Huntington's disease, SCA types 1-5 or 7,
cc x-linked spino-bulbular muscular atrophy (Rennedy disease),
dentarorubral-pallidolusial atrophy, dominant autosomal spinocerebellar
cc ataxia, familial spastic paraplegia, bipolar affective disorder, manic

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMPUTER FEADABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IPM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION DATA:
APPLICATION NUMBER: US/08/785,310A
FILING DATE: 21-JAN-1997
CLASSIFICATION: 5336
ATTORNEY/AGENT INFORMATION:
NAME: OSMAN, RICHARD A
REGISTRATION NUMBER: 36,627
REPERENCE/DOCKET NUMBER: UTSD:1226
TELECOMMULCATION INFORMATION:
TELEFOME: (415) 343-4341
TELEFAX: (415) 343-4341
INFORMATION FOR SEQ ID NO: 6:
SEQUENCE CHARACTERISTICS:
LENGTH: 594 amino acids
TYPE: amino acids
TYPE: amino acids
TYPE: ATRANDEDNESS: single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  870 AA

On Mar 21, 1999 this sequence version replaced g1:4378895.
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences wit

                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence was generated from part of bacterial clone contigs man chromosome 20, constructed by the Sanger Centre Chromosome Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr20 1049016 is from the library RPCI5 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further details see http://bapac.med.buffalo.edu/ VECTOR: pCYPAC2.
                                         This sequence is the entire insert of clone 1049G16. The true left end of clone d73372 is at 5455 in this sequence. This sequence has been finished according to sequence map criteria as follows. attempt is made to resolve all sequencing problems, such acompressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3333. .3737
